

## **CDC COVID-19 Testing Guideline**

The U.S. Centers for Disease Control (CDC) has announced that as of January 26, 2021 that all international airline passengers two years of age or older will be required to present documentation of a negative COVID-19 viral test result (either a nucleic acid amplification test or a rapid antigen test) or show proof of positive viral test in the past 3 months and a letter from your healthcare provider or a public health official stating you were cleared to travel, in order to board and fly into the U.S.

The testing must be done within 3 calendar days of your journey back to the U.S. (if you are connecting, the test needs to be performed within 3 calendar days of your first flight, as long as you have no layover of more than 24 hours).

This test is at the traveler's expense and must be presented to your airline at time of check-in.
